

**SYSTEM AND METHOD FOR ELIMINATING VIRUSES  
AT A WEB PAGE SERVER**

**ABSTRACT OF THE INVENTION**

A system and method for providing anti-virus protection to a web server. The method comprises the steps of: receiving web pages that are to be stored at the web server; stripping active elements from the web pages being stored at the web server; storing the web pages at the web server; receiving a request for a web page to be served by the web server; determining if active elements are required for the requested web page; inserting active elements into the requested web page if active elements are required; and serving the requested web page.
